

Enjoy the outdoors but 'be tick aware'

Being tick aware by using the following information can help to reduce the chance of tick bites and risk of Lyme disease:

- ticks can transmit microbes that cause infections such as Lyme disease
- you could be exposed to ticks whenever you spend time outdoors, including when in your garden or the local park
- ticks mainly attach to animals, but sometimes they may bite you or your family
- you can reduce the chance of tick bites by walking on clearly defined paths, using insect repellent and performing **regular tick checks**
- some tick bites can result in infection, so it is important to remove ticks safely and as quickly as possible
- the safest way to remove a tick is by using a pair of **fine-tipped** tweezers or a tick removal tool
- if you begin to feel unwell with flu-like symptoms, or develop a spreading circular red rash (which usually appears within 1 to 4 weeks after being bitten), **contact your GP or NHS 111 promptly**. Mention if you were bitten by a tick or have recently spent time outdoors

Tick sizes compared to a one penny coin

Tick in the environment

Tick attached to skin

Lyme disease bullseye rash

Tick found under hair
